

A Critical Healthcare Connector for Southern California

As part of a national network of 57 Organ Procurement Organizations (OPOs), OneLegacy's operations are both complex and vital to the system, but how do OPOs bridge the gap between hospitals and transplant centers to facilitate the gift of life?

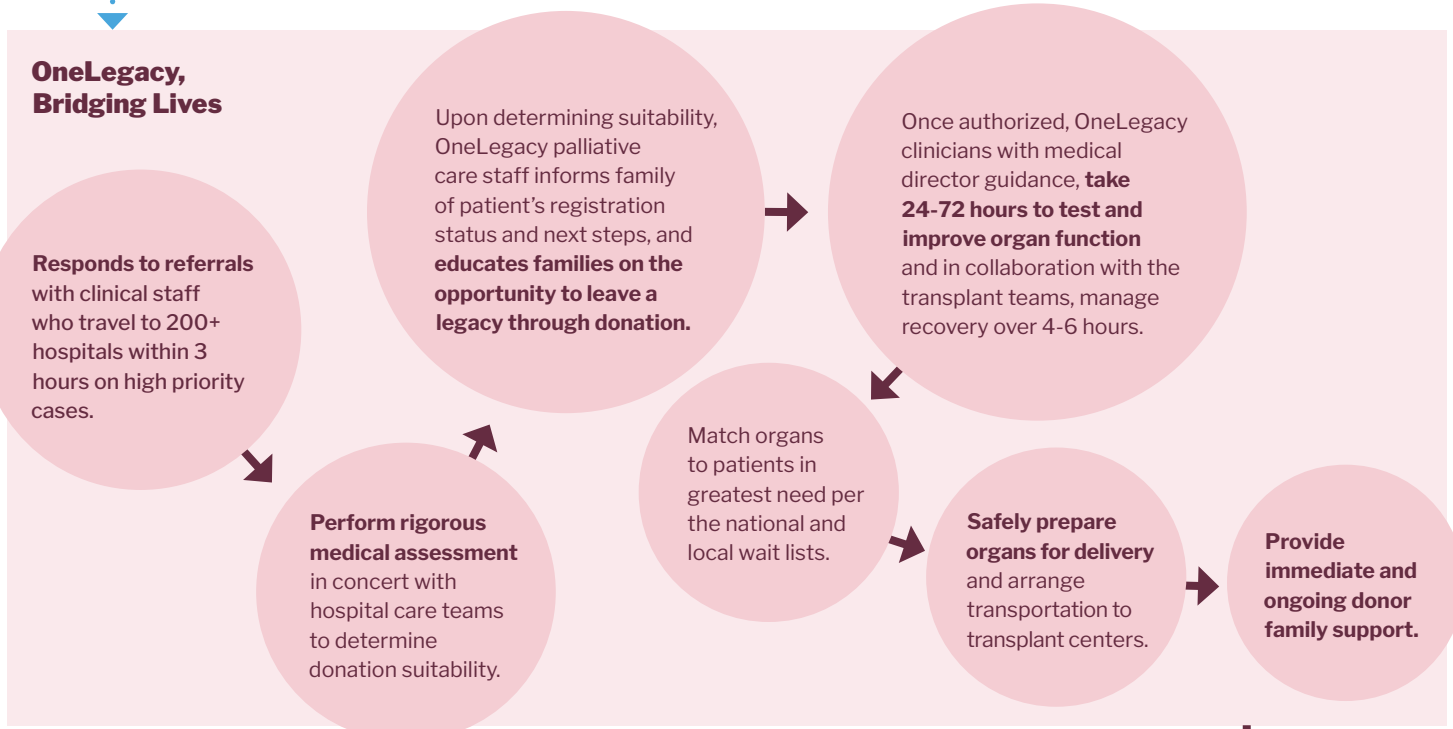

How OneLegacy Operates

OneLegacy plays a critical role in Southern California's healthcare system, acting as the bridge between donors and patients waiting for a lifesaving organ, eye or tissue transplant.

Did you know?

Less than 1% of all deaths are eligible for organ donation. A donor must be in the hospital and meet specific criteria, like being brain dead and on a ventilator.

Recipient

Organ donation provides a second chance at life for thousands of Americans each year. In 2020, OneLegacy marked its fourth year of record-breaking donation increases by:

Facilitating **1,661** organ transplants in 2020.

Healing **190K** lives through eye & tissue donation.

OneLegacy is Investing to Improve Donation

California is home to 17.5 million registered donors, more than any other state. Despite our millions of registered donors, the need for lifesaving transplants continue to grow, and OneLegacy is working nonstop to improve organ donation to meet this growing need. In addition to our work facilitating donation, OneLegacy is investing in the following areas to help save more lives.

Community Outreach

Donation begins before a donor reaches the hospital. In order for OPOs to increase donation rates we must increase registration and authorization. That work begins by educating our community and breaking down barriers to donation.

Targeted Community Partnerships

Ambassador Programs—
Providing First-Person Testimonials

Comprehensive Online Resources

Culturally Competent Outreach
Specialists

Palliative Care

Public Education Campaigns

World's Largest and Most Effective
Donation Promotion Program—
Donate Life Rose Parade Float

Research & Innovation

OneLegacy is advancing the science of donation and transplantation and employing technological innovations in our own operations to make transplants safer and increase available organs.

Investing in Research Studies
and Clinical Trials

Opened California's First-Ever
Transplant Recovery Center

Hired 3 Medical Directors to Review and
Oversee 100% of Donation Referrals

First Web-Based Organ Offer And
Electronic Donor Record System

Real-Time Testing For Infectious Viral RNA

Professional Education

Improving donation can mean improving policies, coordination and education with our professional partners including hospitals, transplant surgeons and the county coroner.

OneLegacy Webinars, Workshops
& Trainings

Annual Donation Symposium for 1,200+
Hospital Professionals

Access to National and International
Webinars Demonstrating Best Practices

Monthly Staff Education for all 200+
Hospitals as Practices Improve and New
Staff Join Hospitals

Industry Conferences & Events

The Result?

Saving More Lives Each Year

OneLegacy's community outreach, research & innovation and professional education has continuously improved organ donation and resulted in significant increases in organ, eye and tissue transplantation, despite the impacts of COVID-19.
